01 November 2007

Mr. Bennett Stubbs
Chairman
Turks & Caicos Telecommunications Commission
The Center
Leeward Highway
Providenciales
Turks and Caicos Islands

Dear Mr. Stubbs,

Digicel Turks and Caicos 2.3 and 3.5 GHz Spectrum Requirement

As you are aware, Digicel is committed to developing the Turks and Caicos telecommunications environment, and as such are constantly looking for ways to bring competition, innovation and true value into the Turks and Caicos market.

Through the use of innovative point-to-multipoint wireless technology, Digicel plans to embark on a project to provide wireless data services to our valued customers.

On behalf of Digicel (Turks and Caicos) Limited, I respectfully request that the Telecommunications Commission grant Digicel additional spectrum for the deployment of its point-to-multipoint network in the 2.3 GHz and 3.5 GHz bands as per table 1 below:

Table 1: *Frequencies requested to The Department of Telecommunications in the 2.3 and 3.5 GHz band*

Band	Required Spectrum
2.3 GHz	2305 to 2360 MHz
3.5 GHz	3400 to 3449.99 and 3500 to 3549.99 MHz

Should the Telecommunications Commission have any further questions or should it require any further information to assist in its consideration, please let us know as soon as possible. We will respond to any such request as a matter of urgency.

We look forward to receiving your positive decision with regards to this request.

Yours sincerely,

E. Jay Saunders
General Manager
Digicel TCI Limited

Cc. Hon. Jeffery Hall, Minister of Telecommunications and Public Works
